

LIAM NICHELE

Software Engineer / Computer Scientist / Systems Architect

Defence & national security software

Italy · EU citizen · liamnichele@icloud.com · github.com/ikerscode · linkedin.com/in/liam-nichele-920a0022a

Summary

Software engineer focused on defence and national security. I build the systems that turn raw sensor and imagery data into something a person can act on, and I have already designed and shipped a self-hosted satellite-imagery intelligence platform on my own, end to end. Final-year Computing & IT student and EU citizen, based in Italy and open to relocation across Europe.

Projects

VANTAGE — Satellite-Imagery Intelligence Platform Independent · 2026

- Self-hosted workbench for defence and ISR analysts: pulls Sentinel-2 optical and Sentinel-1 radar imagery, runs change detection between two dates, and a fine-tuned vessel-detection model, with scheduled monitors that alert when an area changes.
- Built full stack, solo: React, TypeScript, MapLibre GL and deck.gl on the frontend; FastAPI, PostgreSQL/PostGIS, SQLAlchemy and Rasterio on the backend; a PyTorch inference service; Docker; and a Tauri desktop launcher.
- Scoped deliberately as analysis, not targeting: it reports what is present and what changed, and nothing past that.

Gullwing — Cross-Platform Systems Console Independent · 2025

- Fully offline system utility for Windows, macOS and Linux behind a mission-control interface: security audit, malware heuristics, performance tuning and benchmarking.
- Every change is reversible and shown as the exact command before it runs. No cloud, no account, no telemetry.

Experience

Team Lead Impact · Feb 2026 – Present · Italy, Remote

- Lead the team and own reporting and data-science work; manage the lead-qualification pipeline and training.

Sales Development Representative Guitar Zoom · Apr 2025 – Feb 2026 · Remote

- Pre-qualified inbound leads and organised training for an online music-education platform.

AI Solutions Consultant Immersive Fox (Contract) · Nov 2024 – Feb 2025 · Remote

- Engaged prospects on AI-driven products, communicated their value, and connected qualified leads to account executives.

Solar Design & Sales Alumo Energy · Mar 2022 – Feb 2024 · South Africa

- Progressed across five roles in two years, from Junior Solar Designer to B2B Sales Specialist, leading and training design teams.
- Designed 4,000+ solar systems sized to client requirements and ran quality control on outgoing quotations and designs.
- Built KPIs and daily data tracking, handled back-end website management, and closed B2B deals with company directors.

PC Technician Freelance · Jan 2021 – Mar 2022

- Self-employed computer specialist building custom hardware and software to client requirements.
- Custom software across Java, C++, Python, SQL, JavaScript and VBA; database management, project management, and client support.

Education

BSc (Hons) Computing & IT University of Derby · 2022 – 2026

- University of Derby was voted UK University of the Year for 2027 (Uni Compare), from more than 24,000 student reviews.

Skills

Languages: Python, TypeScript, SQL, Bash, Rust

Backend & ML: FastAPI, PyTorch, PostgreSQL/PostGIS, SQLAlchemy, Rasterio

Frontend: React, MapLibre GL, deck.gl, Vite

Infrastructure: Docker, Linux

Focus areas: Computer vision, remote sensing (optical and SAR), geospatial data, systems architecture

Writing

“Where to Look, Not Where to Shoot” — on the boundary between analysis and targeting in defence software.
